- All video backed up in a secure offsite cloud

- View live feeds & recorded video events from anywhere and at any time

- Receive instant notifications when motion is detected

- Compatible with a wide range of professional security cameras

- Intelligent video analytics

Videoloft features.

Timelapse.

Track your project progress with day-to-day timelapse video. Easily share the timelapse video with your customers.

PTZ — Remote PTZ controls.

If you have PTZ cameras at the site, you can control them remotely straight from the Videoloft mobile app.

Secure offsite backup with network outage protection.

Record straight to the cloud or alongside a local recorder - all your video is encrypted & securely stored in the Videoloft cloud so it's safe. If there's a network outage video will be locally stored to the edge and uploaded to the cloud when the network is restored.

PIR activated video recording & alerts.

Add an optional PIR sensor to your Videoloft installation to reduce false alerts caused by bugs, rain or wind. Great for getting accurate and reliable alerts and footage from large sites to catch the motion that matters the most to you.

Multi-user permissions.

Give relevant stakeholders read-only or full admin access to all or specific cameras to track project progress remotely, or to keep an eye on the site when you can't.

Analytics & smart search.

Turn a basic CCTV system into an intelligent one. Ensure appropriate safety equipment is being worn using object detection. Available as an add-on feature.

- Remote video access
- Scheduling alerts & recording
- Scalable & flexible
- Always improving
