Offsite cloud video storage.
Protect your remote site CCTV system.

Video Surveillance

Recording in Progress
www.LewisSurveillance.com

Powered by **.videoloft**

- All video backed up in a secure offsite cloud

- View live feeds & recorded video events from anywhere and at any time

- Receive instant notifications when motion is detected

- Compatible with a wide range of professional security cameras

- Intelligent video analytics
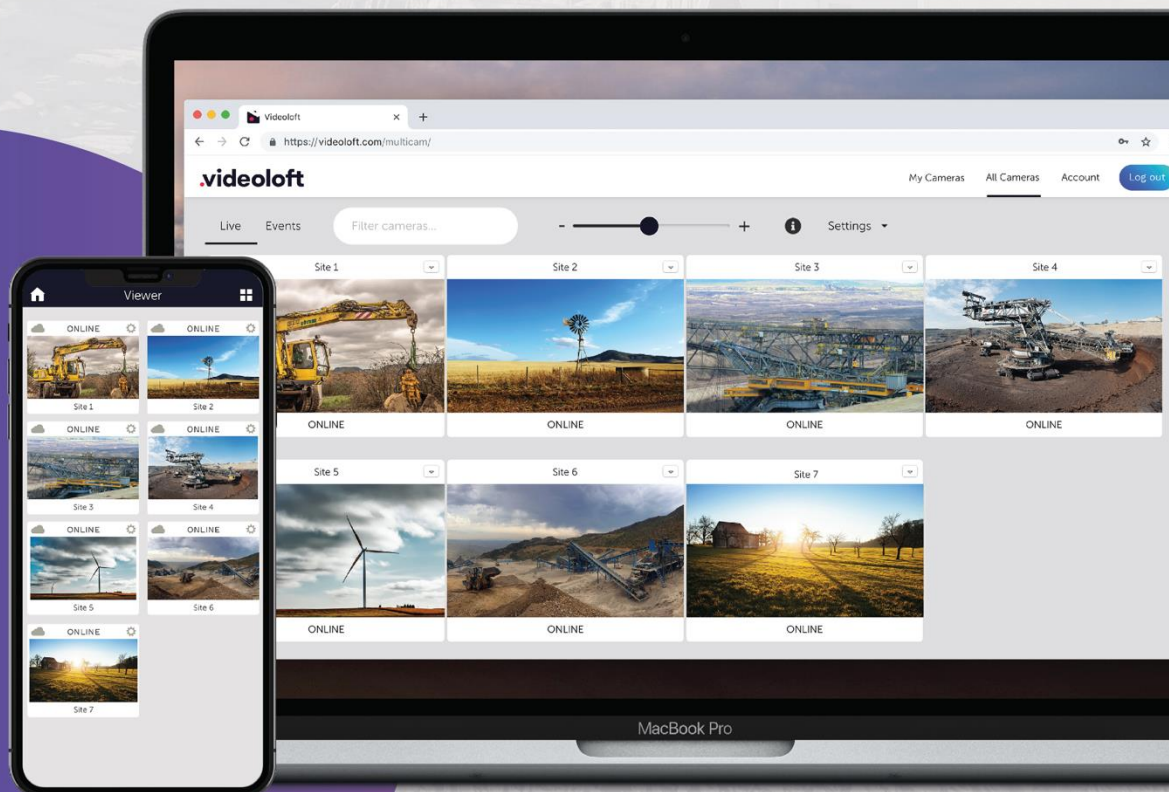

Videoloft features.

Secure offsite backup.

Record straight to the cloud or alongside a local recorder - either way, all your video is encrypted & securely stored in the Videoloft cloud, so it's safe and to hand if you need it.

Network outage protection.

Even if there is a network outage or the internet connection is interrupted, video will be locally stored to the edge and uploaded to the cloud when the network is restored.

Record to cloud even without wired internet.

No wired internet? No problem! Your CCTV system can also run on a 4G router & record directly to the cloud. You can reduce the bandwidth usage by recording in SD if you need to.

PIR activated video recording & alerts.

Add an optional PIR sensor to your Videoloft installation to reduce false alerts caused by bugs, rain or wind. Get accurate alerts and reliably catch the motion that matters to you.
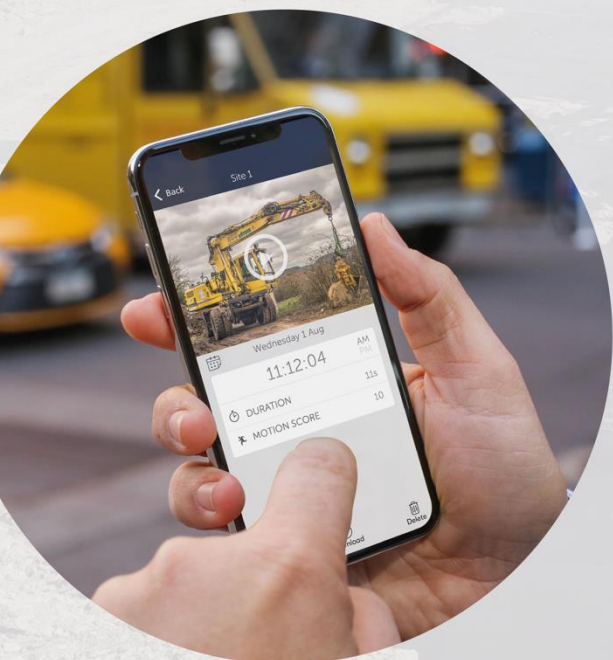

Scheduling.

Schedule when cameras record & when you receive alerts. Configure the schedules for specific cameras and/or time periods.

Remote PTZ controls.

If you have PTZ cameras at the site, you can control them remotely straight from the Videoloft mobile app.

Remote video access

Multi-user permissions

Scalable & flexible

Analytics & smart search

Cloud fees | Per camera, per month
